

Norstar

PBE - 200™

BUILT TO ENDURE

An unprecedented mobile loading station, the patented PBE 200™ is an innovative solution for frac sand handling. Featuring a **portable conveyor and bucket elevator** combination designed for fast unload of trucks and the loading of multiple silos/transloading stations, the PBE is built to withstand the high demand of frac sand handling while operating at full-capacity. Efficiency is key, and the PBE meets this goal with the **ability to move 200 Tons/Hr**. Simple operation and a trailer base that enables easy transportation between loading sites proves the PBE 200™ to be a cost-efficient and cutting-edge loading solution for the frac sand industry.

Completely Mobile

Designed specifically for Frac Sand Handling

Hydraulically Lifted Bucket Elevator with Telescoping Discharge Chute

Drive-Over Belt Conveyor

Move 200 Tons/Hr (fills a 260 ton silo in just over 1.5 hrs)

Simple and Efficient Deployment (deploy or pack up within 12 minutes)

INNOVATIVE MOBILE DESIGN

Mobility is the driving force behind the design of the PBE 200™. Norstar wants to allow you to move large quantities of sand in a short amount of time, but with the added ability to move the equipment to where you need it, both safely and efficiently.

The PBE can be deployed to load position or packed into transport position within 12 minutes. The trailer-bed is designed to securely house both the bucket elevator and the conveyor during transport, promoting safe and quick movement between job sites.

The PBE 200™ **aggressively reduces the footprint** of a load/unload operation, when compared to permanent set-ups. The PBE can be stored in multiple locations where space allows.

MINIMUM DEGRADATION

The PBE 200™ offers a more **gentle handling experience** than traditional pneumatic options. The belt conveyor and bucket elevator lifting system provide minimal impact points for frac sand which promotes minimum degradation, ensuring the integrity of the product.

GROUNDBREAKING MOBILITY AND EFFICIENCY
